

Who would not like to increase yield 10-30% and get more profit?

For how long time can the fish industry go against increased yield? Put the cuts, into the muscle of the same kind of fish!

This was the header in our newsletter no 2, 2004. The first **Cozzini system** was sold in Iceland the year 2004 and now **SuspenTec** has been installed in some other industries as well and has been running for almost three years.

This technic "fish in fish" has proofed in a very positive way that it is possible to get unbelievable increased yield without affecting look or the quality of the fish. The SuspenTec system and specially adjusted TR-850 injector for working with salted fish and with freezing of fillets gives incredible profit.

We can say that working with 1500-2000 tons of fish a year, the return time to pay the SuspenTec system is 8-10 weeks. That makes € 0,15-0,20 millions each month. It does make a difference to get 1,8-2,4 million € more per year.

Now when it is clear that cutting down of quote is big, can this genius technic lower the production cost. A beautiful technic to put fish into fish increases the yield a lot, at the same time it is a natural method to insert the cut off without affecting the product.

The SuspenTec system helps directly and in a positive way the development of the expensive product in Iceland in high increased yield.

This patented SuspenTec system from Cozzini is also in use in many fish industries all over the world. The TR-850 injector is "Patent Pending".

*The system is automatic and easy in use, it minimizes the mince and the cuts to micro particles which are mixed with light brine solution, this together make homogeny suspension. The SuspenTec system comes in modules, are easy to place in all processing lines. The **TR-850 injector works better than all other injectors with SuspenTec.***

Advances of the Suspension :

- More binding gives higher yield
- The solution stays inside the product
- Less drip
- No sign of the suspension in the fish-meat
- The system is easy in use

Advantages for the producer, using SuspenTec System:

- Increased yield of raw material
- Unchanged quality
- Usage of natural protein from the same fish
- Higher profit for the company

The injector TR-850 has been adjusted to the SuspenTec system with exceptional result. New filter system has been developed which fits the system very well and makes the use of the SuspenTec more easy. New program makes it possible to change from the usual injection to SuspenTec suspension in an instance.
